Jamie Gist

Front-End Developer | Seattle, WA
jamie.gist.7@gmail.com | 917-242-2071
Portfolio | **GitHub** | **LinkedIn**

Education

Northeastern University | Master of Science in Information Systems **|** Expected December 2026

- Database Management, Application Testing, UI/UX Design, team collaboration

Rutgers University | Bachelor of Arts in English Literature, minor in Psychology | Graduated 2019

Projects

Tarot Card Reader | **View App** | React, Vite, JavaScript

- **State & Data Management:** Engineered an interactive tarot application featuring multi-tier conditional state mapping to handle complex card arrays, randomized deck shuffling algorithms, and dynamic rotational state probabilities (card reversals).
- **Performance-Optimized UI:** Built fluid, custom CSS flip animations, micro-interactions, and staggered layout renders that closely replicate real-world physical dynamics without sacrificing DOM rendering performance.
- **Responsive Architecture:** Leveraged modular CSS Grid frameworks to build fully adaptive, breakpoint-tested layouts that deliver consistent layout integrity across mobile and desktop viewpoints.

Spectral Shots Photography | View App | React, Tailwind CSS, Vite, TypeScript, TanStack Router

- **Type-Safe Component Architecture:** Developed a scalable photography portfolio utilizing strict TypeScript typing to ensure robust prop validation and highly maintainable component structures.
- **Client-Side Routing:** Integrated TanStack Router to establish modular, single-page application (SPA) routing protocols, enabling instantaneous page transitions and clean URL state handling.
- **Fluid Asset Layouts:** Implemented an adaptive, mobile-first design strategy using Tailwind CSS, optimizing image asset scaling and responsive grids for rapid, low-latency visual performance.

Technical Skills

- **Languages:** JavaScript (ES6+), HTML5, CSS3
- **Frameworks & Libraries:** React, React Native, Node.js, Tailwind CSS
- **Build Tools & Version Control:** Vite, Git, GitHub

- **Testing & APIs:** Firebase
- **Design & UX:** Responsive Design, Mobile-First Development, Component-Based Architecture, Object-Oriented Design and Programming, UI/UX Principles
- **Workflow & Collaboration:** Agile/Scrum, Jira, Slack, Microsoft Teams

---

Other Experience

Barista
Instawork - Seattle, WA
July 2026 - Present

- **Dynamic Resource Deployment:** Adapted rapidly to diverse, fast-paced corporate office environments, luxury hotels, and large-scale event spaces, ensuring seamless service continuity under varying operational constraints.
- **Standard Operating Procedures:** Maintained strict execution of complex recipe configurations and compliance metrics, aligning output with highly specific client requirements and state regulatory standards.
- **Inventory & Station Management:** Managed real-time logistics for workspace sanitization, resource stocking, and high-volume asset rotation during peak operational hours.

Lead Dishwasher
Compass @ Google - Seattle, WA
December 2025 - July 2026

- **Workflow Optimization:** Spearheaded real-time task delegation and workflow restructuring for a critical infrastructure team, maximizing throughput, safety, and operational efficiency during high-volume production cycles.
- **Team Leadership & Mentorship:** Directed onboarding and technical training for incoming personnel; provided continuous peer coaching and performance support to foster cross-functional collaboration.
- **Compliance & Data Logging:** Audited and maintained meticulous operational logs tracking thermal metrics and chemical solutions, ensuring 100% compliance with strict corporate SLAs and state regulatory frameworks.
- **Cross-Functional Support:** Monitored capacity constraints across the corporate campus, dynamically deploying to high-traffic satellite facilities to mitigate operational bottlenecks.

Dishwasher
Compass @ Google - Seattle, WA
July 2024 - December 2025

- **SLA Adherence:** Maintained rigorous compliance with corporate infrastructure protocols, safety standards, and operational guidelines within a high-standard enterprise environment.

- **Asset Maintenance:** Managed high-throughput hardware systems, executing precision preventative maintenance, chemical replacements, and daily diagnostics to minimize system downtime.
- **Quality Assurance:** Maintained continuous, data-backed quality control over all high-touch assets, logging daily performance metrics to ensure enterprise-grade sanitation standards.
