Personal Projects

War Card Game

- Built a web-based card game using Python and Tkinter for the GUI.
- Contains logic for the card deck, player, and computer hands and controls the flow of the game.
- Hosted on a domain for easy access and ability for anyone to play.

Source Code: <https://github.com/jamiegist/card-game>

Ecommerce Site

- Built a full ecommerce website with a landing page, shopping cart, and web store
- Includes a check out feature and keeps track of items in the user's shopping cart in local storage.
- Hosted with a live domain for easy access and use.

Pokemon Generator Bot

- Built a bot with a Python script that randomly generates one of the original 151 Pokemon and returns it to the user when called in Discord.
- Can be downloaded and used within a Discord server.
