---

## Personal Projects

---

### War Card Game

- Built a card game using Python and Tkinter for the GUI.
- Contains logic for the card deck, player, and computer hands and controls the flow of the game.

Source Code: <https://github.com/jamiegist/card-game>

### Meme Generator

- Random meme generator using an API that pulls from the r/wholesomememes subreddit and displays it. Automatically refreshes after 30 seconds for a new meme.
- Built with Python, Flask (to run the website on a server), and HTML (for the actual webpage).

Source Code: <https://github.com/jamiegist/meme-generator>

### Ecommerce Site

- Built a full ecommerce website with a landing page, shopping cart, and web store
- Includes a check out feature and keeps track of items in the user's shopping cart in local storage.
- Hosted with a live domain for easy access and use.
