Personal Projects

Ecommerce Site

Built a full ecommerce website with a landing page, shopping cart, and web store. Includes a check out feature and keeps track of items in the user's shopping cart in local storage. Hosted with a live domain for easy access and use. Tools used were CSS, HTML, Bootstrap, and JavaScript.

Source Code: <https://github.com/jamiegist/music-store>

Pokemon Generator Bot

Built a bot in Python that randomly generates one of the original 151 Pokemon and returns it to the user when called in Discord.

GitHub repository is: <https://github.com/jamiegist/pokemon-bot.git>

Work Experience

AI Prompt Designer

Outlier.ai - Remote

December 2023 - present

Coached AI model on thorough and detailed responses to user questions. Reading through chat history, user responses, and model output to evaluate the accuracy of the response as well as catching errors in grammar, spelling, or factual information. Ability to gauge if a model response should be accepted, rejected, and how to handle potentially harmful topics and responses. Topics varied based on assignment. Communicating via Discourse and Slack channels with colleagues for questions or updates on project changes.

Technologies and Other Skills

HTML, CSS, JavaScript, TypeScript, React JS, Python, Node.js , Git, Github, Material UI, Bootstrap, Jira

Education

Rutgers University - New Brunswick, NJ

Bachelor of Arts - English Literature with minor in Psychology

Franklin High School - Somerset, NJ

High School Diploma
